Product designer of 8+ years. I ship what I design, using AI at each step, from research through production. I'm drawn to ambiguous problems where AI shapes experiences around each user's goals.

EXPERIENCE

SHRP · a social screentime app for people trying to cut back on social media (iOS & Android)
Product Designer & Builder · May 2026 - Present

- Designed and built the MVP in 2 months to test product-market fit; 5 beta testers reduced their social media use by 39% on average (42 minutes/day) over 7+ weeks.
- Defined SHRP's visual and interaction system, from wireframes to a consistent UI across iOS and Android, by iterating in high fidelity on device: AI-built prototypes allowed over a dozen iterations in an afternoon, with the final prototype shipping as the product.
- Ran a mixed-methods beta study, conducting 11 interview and usability sessions (18 hours) alongside months of usage data, to learn which features drove results; findings justified a public release and set launch priorities.
- Enabled one-person company operation with a custom system of AI agents, shared knowledge and workflows used to build and run SHRP.

Anew · a smartphone operating system for treating phone overuse (Android)
Founder · Product Design & Strategy Lead · Apr 2020 - Jun 2025

- Led design, research and engineering of Anew OS, an app that modifies the stock Android experience with features and guided self-treatment aimed at addressing the negative behavioral and mental health effects of phone overuse. A 30-day pilot study achieved a 49% reduction in daily user anxiety, validated with clinical measures (GAD-7, BDI-II).
- Structured and managed 6 internships with Carnegie Mellon masters graduates across design, research, and engineering, accelerating production and cutting ~8 months off dev/research timeline.

Uber ATG · Uber's self-driving car division
Senior Interaction Designer · Nov 2018 - Mar 2020

- Led design for Map Maker, the internal tool turning raw AV data into self-driving maps, as its sole designer. Redesigned its input schema and core annotation workflows, increasing the mapping team's overall efficiency by 27% ($72k/month) and making key workflows up to 70% faster.

John Hancock Financial · a US insurance and financial services company
UX Designer · Aug 2016 - Aug 2017

- Established design practice from scratch, as 1 of 3 first design hires, by teaching and embedding UX research and design best practices into PM and engineering workflows.

SKILLS

AI and build: Claude Code, agent orchestration, context engineering, LLM product design, quality review of AI output, architecture and technical trade-offs, coding experience (HTML/CSS/JS, Kotlin/Jetpack Compose)
Design: 0-to-1 design, product strategy, interaction design, AI prototyping, visual design, style guides, Figma
Research: mixed-methods study design, usability testing, interviews, surveys, success metrics
Collaboration: cross-functional leadership, stakeholder alignment, mentorship

EDUCATION

Carnegie Mellon University
BA - Software, Art, and Entrepreneurship (HCI/CS) · 2011 - 2015

- Led HCI capstone team; project received $1.4M in further government funding.
- Co-founded startup that raised $125k in angel investment.
